FOR IMMEDIATE RELEASE

InVizion™ Delivers Release 2.0 of Scenario Planning and What-If Analysis Software for Executives and Program Managers in Asset-Intensive Industries

InVizion Analyzer 2.0 closes the gap between high level project portfolio analysis software and detailed project planning and management software

Oak Ridge, Tennessee, USA (October 8, 2014) – InVizion LLC announced today Release 2.0 of its InVizion Analyzer software for scenario planning and what-if analysis designed for Executives and Program Managers in asset-intensive industries, such as Utilities, Oil & Gas, and Transportation. Improving upon the prior release created to support programs of the U.S. Department of Energy, Release 2.0 includes many commercial features suitable for senior managers in any organization with large projects and/or portfolios of projects.

“Senior managers are required to make objective and defensible decisions throughout the lifecycle of large projects and programs, but the popular project portfolio management (PPM) tools at their disposal today are either too removed from project realities or too detail-oriented and require intimate knowledge of projects,” explains Kristy Neckowicz, Senior Vice President of InVizion. “Regardless of which PPM tools their organizations are using, Release 2.0 of InVizion lets them integrate multiple scopes, schedules, and dependencies with funding sources, budgets, and other constraints into one model, with sufficient granularity for scenario planning.”

InVizion complements popular PPM tools in the market, such as Oracle® Primavera P6® and Microsoft® Project, to enable real-time scenario analysis by leveraging summarized project plans and dependencies without interfering with the ongoing project planning and control processes. Based on patent-pending algorithms, InVizion interprets dependencies across projects to expose risks and present opportunities associated with proposed changes.

“Our consultants can now use InVizion to pull relevant information from detailed project plans to model changes to funding categories and resource elements across an entire program,” said Randy Musick, Senior Consultant at Professional Project Services, Inc. “The flexibility in InVizion Release 2.0 allows us to map detailed project resources to the higher level manpower categories we need to model what-if scenarios and set up cost formulas, if necessary. We can distribute fees and other overhead cost

October 9, 2014

and hours over time to get the complete big picture that we cannot get from the detailed project plans alone. Release 2.0 gives senior management the ability to make well-informed decisions without the need to be (or to hire) a wizard programmer of Excel® macros and pivot tables.”

About InVizion LLC

InVizion develops and markets applications for executives and managers for modeling and communicating program and portfolio scenarios to enhance decision-making and optimize execution strategy. Founded in 2013, InVizion LLC is led by former Oracle and Primavera Systems’ executive Kristy Tan Neckowicz and sales executive Greg Abbott, each having over 20 years of experience in the project management software industry.
